- Monitoring
- Alarm and fault event distribution
- Web server
- E-mail notification

- SMS Paging
- Fire alarm monitoring over
- LAN / WAN / Internet

TELEFIRE
FIRE & GAS DETECTORS LTD

Features

Telefire's Internet Enabled Monitoring and Notification Modules enhance the features of the ADR-3000, TSA-1000, and TSA-200 fire alarm control panels by adding remote monitoring over LAN, WAN, or internet, using a standard web browser and distributed alarm and fault events via a built-in web server, e-mail notifications and SMS paging.
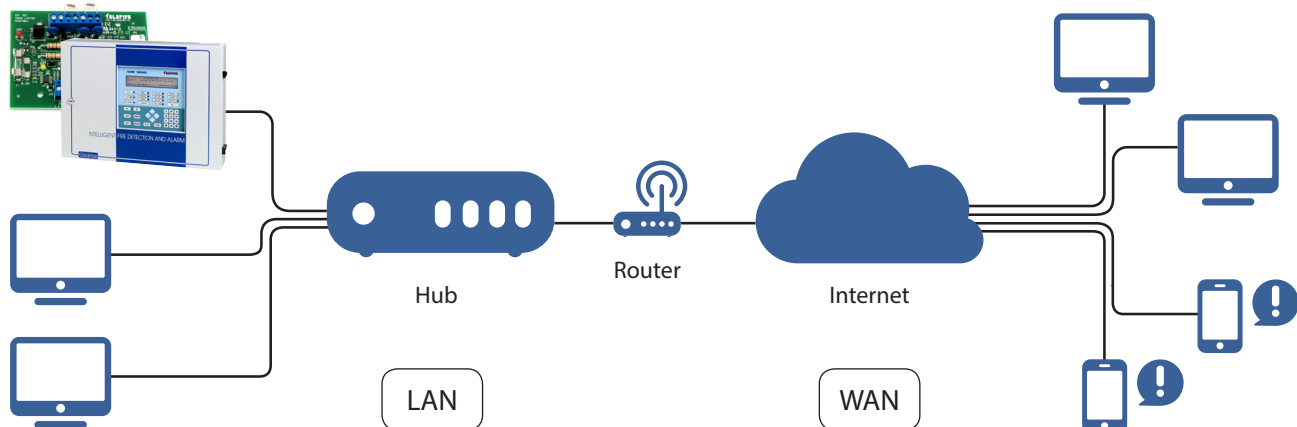

- A built-in web server enables remote monitoring of fire alarm control panel status using a standard web browser. The web server provides system status and essential system information such as location, address, and contact phone numbers

- Optional e-mail notification of fault and alarm events. The e-mail message includes a brief description and a hyperlink shortcut for instant browsing of the system's status

- SMS notification of alarm and trouble events

- Remote diagnostics using Telefire's TCS-3040 software. Events are detailed to an individual detector or input/output module for the ADR-3000 analog addressable fire alarm control panel, and TSA-200 two zone conventional fire alarm control panel.

Benefits

The NET-3000, NET-1000, and NET-200 offer several benefits to the end user and service provider:

- Centralized control of distributed sites of an organization

- Distribution of event notification to key personnel in the organization

- Integration with existing LAN / WAN / Intranet infrastructure or the Internet

- Remote event notification reduces service costs due to time savings for service personnel

- Faster response to service calls

- More efficient use of technical manpower in the service organization.

Internet Enabled Monitoring and Notification Modules

Compatibility

- The NET-3000 is compatible with the ADR-3000 Analog Addressable Alarm Control Panel
- The NET-1000 is compatible with the TSA-1000 Conventional Multi-zone Alarm Control Panel
- The NET-200 is compatible with the TSA-200 Conventional Two Zone Alarm Control Panel
